Professional Summary

Product-minded TypeScript engineer with a graphic-design background. I built and run Chains, a multi-tenant workflow SaaS, owning UX, frontend and backend architecture, testing, and delivery end to end.

AI-native workflow: I write specifications with Given/When/Then acceptance scenarios, drive coding agents to implement them, and own architecture, code review, and verification through automated tests. Looking for a product team where I can take ownership of features from idea to production.

Skills

Frontend: TypeScript, React, Next.js, Astro, TanStack Query/Table, Zustand, Redux Toolkit, SCSS, Tailwind CSS, Storybook
Backend & Data: Node.js, NestJS, PostgreSQL, TypeORM, Supabase Auth/Storage, Socket.IO, REST/OpenAPI
Testing & Quality: Vitest, Jest, Playwright (E2E, accessibility), Sentry, PostHog
Platform: Docker, GitHub Actions CI/CD, GHCR, Linux/Nginx, AWS fundamentals
Product & Design: UX for complex workflows, SVG/canvas/PDF interfaces, Figma, Adobe Creative Suite
Also: Chrome Extensions (Manifest V3, WXT), n8n, AI coding agents (Codex, Claude Code, Cursor)
Languages: English (professional working, B2), Russian (native), Spanish (A2)

Professional Experience

Founder / Full-Stack Engineer — Chains.design
Barcelona, March 2023 – Present
Workflow SaaS for editorial and design teams (public beta), in production with an external pilot team for two years. TypeScript monorepo: React web app, NestJS/PostgreSQL API, Astro marketing site, and a published browser extension.

Chrome extension: chromewebstore.google.com/detail/chains

— Replaced the pilot team's Google Sheets coordination with a workflow engine that always shows whose turn it is: status and next actions are derived automatically from submitted work and approvals, so nobody updates statuses by hand.
— Designed a visual DAG workflow builder (templates, parallel branches, merge points, roles) for modelling each team's process.

— Built real-time collaborative PDF review: virtualized rendering, live cursors and presence, optimistic annotations synced over Socket.IO, and PDF export.
— Built the NestJS/PostgreSQL backend with shared typed HTTP/WebSocket contracts, tenant-aware authorization, and Supabase Auth/Storage.
— Defined and documented the frontend state architecture (TanStack Query + Zustand); set up layered tests (unit, integration, Playwright E2E) and Docker/GitHub Actions CI/CD.

Full-Stack Developer — Jupid (Fintech Startup)
Barcelona, April – October 2025
Early-stage AI accounting SaaS. Worked in a small product team directly with the CTO.

— Shipped production frontend features with Next.js, TypeScript, and TanStack Query.
— Implemented and maintained integrations with banking APIs (Banno), Stripe, Customer.io, and PostHog.

Web Developer — Tomita Software
October 2020 – May 2023
— Maintained 10 client web platforms (Symfony, React) in a ticket-driven workflow: production UI/layout fixes and small functional updates.
— Built several marketing websites from scratch.

Front-end Developer — Kamina Mental Health Platform
Project-based, January 2024
— Delivered a responsive multilingual landing page in one month, including an interactive SVG illustration, working directly with stakeholders.

Graphic Designer
Moscow, October 2017 – March 2023
— Editorial, branding, and wayfinding design: 10+ books, 30+ magazine issues, 150+ wayfinding stands for public spaces.
